

FOR IMMEDIATE RELEASE

## **Genflow Biosciences Partners with Revatis SA and EXO Biologics in Groundbreaking Aging Research, Fueled by Two Major Research Grants**

LONDON, United Kingdom, Jan. 18, 2024, -- Genflow Biosciences Plc (Genflow or the "Company") (LSE:GNF) (OTCQB:GENFF), an emerging leader in the field of longevity research developing therapeutics that potentially halt or slow the ageing process, in collaboration with Revatis SA and EXO Biologics, is proud to announce the initiation of two significant research programs backed by substantial non-diluting and non-reimbursable research grants by the Government of Wallonia in Belgium. Both of these strategic initiatives will strengthen Genflow's position at the forefront ageing-related research, and its mission to improve the health and well-being of older adults.

### **Technological Innovation Partnership (ATMP)**

Funding for the two research programs, as part of the Wallonia Recovery Plan by the Walloon Government in Belgium, will be disbursed annually to the Company, contingent upon Genflow and its collaborators achieving specific, activity-based milestones. Continued receipt of the grants by Genflow is independent on the parties meeting predefined criteria each applicable year.

The two research programs are a part of a broader innovation partnership that the Walloon Government has launched, dedicated to Advanced Therapy Medicinal Products (ATMPs). The partnership boasts a substantial budget of 81 million euros, a mix of 60% public funding and 40% private contributions from various companies, spread over three years. This initiative is a collaborative effort involving BioWin, the Health Cluster of Wallonia and the Public Service of Wallonia, representing a significant commitment to advancing medical research and development in the region.

### **Sarcopenia Research Program with Revatis SA**

Genflow, together with Revatis SA, has launched a 3-year sarcopenia research program, generously funded by new grants totalling 1.34 million euros. Sarcopenia, the progressive loss of muscle mass and function associated with ageing, poses a significant health risk and affects the quality of life for millions of elderly people worldwide. This collaborative effort aims to expand and diversify Genflow's research pipeline, addressing this growing concern as the global population ages. The partnership will leverage both companies' expertise to develop innovative solutions and contribute valuable insights into the mechanisms of age-related muscle deterioration.

### **mRNA Delivery Research with EXO Biologics**

Genflow and ExoBiologics have initiated a 3-year scientific program, supported by a grant of 1.55 million euros. The project focuses on the development of a novel mRNA delivery system using exosomes to encapsulate and transport Genflow's proprietary centenarian SIRT6 gene. This cutting-edge approach aims to harness the natural advantages of exosomes, such as enhanced stability, improved cellular uptake, reduced immunogenicity, minimal toxicity, natural cargo sorting and reduced off-target effects, among others. This endeavour not only demonstrates Genflow's momentum in leading-edge research but also holds the potential to revolutionize therapeutic interventions for Werner Syndrome, an accelerated ageing condition and holds great promise for a range of other age-related conditions.

Dr. Eric Leire, CEO of Genflow commented: "We are excited to embark on this exciting new research, which aligns with our quest to understand and alleviate the impacts of ageing. Launching both of these programs represents a strategic move to enhance our research capabilities, while contributing to the understanding of age-related conditions. With the support of our partners and the backing of these two grants, we are poised to make meaningful advancements in the field of longevity."

### **About Genflow Biosciences**

Established in 2020, Genflow Biosciences Ltd is a UK-based biotechnology company, with R&D facilities in Belgium, developing and researching potential novel therapeutics that halt or slow the ageing process enabling society to live longer, healthier lives. Genflow Biosciences lead compound is GF-1002, works through the delivery of a centenarian variant of the SIRT6 gene which has yielded promising

preclinical results. Genflow Biosciences expects to commence a clinical trial in 2024 to study the potential benefit of GF-1002 in non-alcoholic steatohepatitis (NASH) for which there are few or no-approved therapies. By treating ageing as a risk factor to disease, Genflow Biosciences aims to reduce the financial, emotional, and social costs of an ageing population. #### **About Revatis SA**

Revatis SA is a biotechnology firm based in Luxemburg specializing in the collection, production and storage of autologous muscle-derived mesenchymal stem cells (MdMSC) for immediate therapeutic use or storage for further processing. RevaTis technology is minimally invasive and offers benefits for generating a large number of autologous stem cells. Their expertise in sarcopenia research makes them a valuable partner in addressing muscle deterioration in the elderly. For more information: [www.revatis.com](http://www.revatis.com)

#### **About EXO Biologics**

EXO Biologics is Belgian biotech company committed to developing biopharmaceuticals using Extracellular Vesicles (EVs). Their work in mRNA encapsulation and delivery is revolutionizing the approach to genetic and cellular therapies. For more information: [www.exobio.be](http://www.exobio.be)
